FIXED DEVELOPMENT FEE

USD 130-135
ESTIMATED INITIAL PRODUCTION
COSTS

2 + 2 + 1
DOMAIN YEARS / EMAIL YEARS /
HOSTING YEAR

Project domain

section-wood-works.com

Effective date: _____ Meeting date: _____ Target launch: 1 August 2026

Purpose

This document records the meeting decisions and becomes the binding project agreement when signed by both parties. Items labeled as estimates are not fixed third-party prices.

01 / MEETING MINUTES

Decisions recorded

The following points reflect the direction discussed for the SECTION digital presence and are incorporated into the project scope.

#	Decision	Agreed direction
01	Digital experience	Create a landing gallery, a portfolio, and a protected administration portal containing inquiries submitted by website users.
02	Editorial approach	Present each product or project as a story - context, craft, materials, process, responsibility, and outcome - rather than as a catalogue or a simple product listing.
03	Production domain	Use section-wood-works.com, subject to availability at the time of purchase and successful registration in the Client's name or account.
04	Domain and email	Planning estimate: USD 35 for the domain for two years plus USD 30 total for two business email seats for two years. Expected combined estimate: USD 65.
05	Hosting	Purchase one year of production hosting when the parties approve launch. Planning estimate: USD 65-70 for the first year.
06	Development budget	Fixed development fee: EGP 25,000, excluding third-party services, taxes if applicable, paid assets, content production, and change requests.
07	Production purchase	The first production purchase is estimated at USD 130-135 in total. Actual checkout may be lower because of Hostinger discounts, or higher because of taxes, exchange rates, add-ons, or changed pricing.

Product-story principle

"A visitor should understand why the work exists, how it was made, and what SECTION delivered - not just see a row of products."

Record status

- These minutes document the confirmed commercial direction described above.
- The clauses that follow add delivery, review, ownership, privacy, and change-control terms so both parties have a practical working agreement.
- If a later signed change order conflicts with this document, the signed change order controls only for the affected item.

02 / SCOPE OF WORK

Public website experience

The Developer will complete and prepare the public website for production using the existing SECTION codebase and the approved brand direction.

A. Landing gallery and brand story

- A responsive, high-impact landing page built around project imagery, SECTION's positioning, services, materials, manufacturing, process, and a clear inquiry call to action.
- Editorial motion and image reveals that support the story without blocking keyboard use, mobile scrolling, or reduced-motion preferences.
- English and Arabic public routes, including right-to-left layout support for Arabic.

B. Portfolio and project stories

- A portfolio index with filtering by project sector and links to individual project stories.
- Individual case-study pages covering overview, scope, location, project elements, responsibilities, materials, gallery captions, and next-project navigation.
- Collection pages for kitchens, dressing rooms, living spaces, custom units, bedrooms, wall cladding, architectural doors, and materials or finishes, using available approved content.
- Content labels that distinguish approved project evidence from concepts, placeholders, or information still awaiting verification.

C. Inquiry journey

- A five-step inquiry form that asks what the visitor needs, the requested support, project stage, optional brief and files, then name, phone, and consent.
- Up to three optional PDF, JPEG, PNG, or WebP attachments, each up to 10 MB.
- Confirmation state after submission and internal notification to the agreed staff mailbox.
- Server-side validation, basic anti-spam controls, rate limiting, consent recording, and private attachment access using expiring links.

D. Search and launch readiness

- Localized titles and descriptions, canonical links, language alternates, sitemap, robots instructions, social preview metadata, and structured data for the organization, projects, collections, and inquiry page.
- Responsive layouts for current desktop and mobile browsers, stable image sizing, semantic headings, keyboard navigation, and baseline performance checks.
- Production configuration for the agreed hosting environment, database, private file storage, email notification service, domain, and SSL where supported by the selected provider.

03 / ADMINISTRATION AND TECHNICAL DELIVERY

Inquiry administration portal

The portal is a focused lead-management surface. It is not a full content-management system unless added through a signed change order.

Included portal functions

- Protected sign-in for authorized SECTION staff through an authentication method agreed during production setup.
- Inquiry list showing submission date, contact details, selected project elements, requested service scope, project stage, and current status.
- Inquiry detail view containing the visitor's brief, consent record, technical submission details, and links to permitted attachments.
- Basic search or filters and status updates suitable for a small inquiry pipeline, including received, contacted, qualified, and closed states.
- Access limited to authorized staff accounts. Public visitors will not be required to create an account.

Technical delivery based on the inspected code

Area	Implementation direction
Application	Responsive Next.js application with English and Arabic routes and an editorial component system.
Inquiry data	Structured inquiry records stored in a production database, with attachment metadata linked to each inquiry.
Private files	Private object storage with restricted, expiring access links for submitted files.
Notifications	Transactional email notification after an inquiry is stored; a notification failure must not erase the saved inquiry.
Security baseline	Validation, allowed file types and sizes, consent, anti-spam honeypot, basic request limiting, and secret-based file signing.
Search	Localized metadata, sitemap, robots rules, language alternates, social cards, and structured data.

Not included in the EGP 25,000 fee

- E-commerce, online payment, cart, inventory, customer accounts, product pricing, or catalogue checkout.
- A full CMS for editing all projects and pages, advanced CRM automation, accounting integrations, or mobile applications.
- Photography, video production, 3D rendering, translation, brand redesign, paid fonts, stock assets, paid advertising, or ongoing SEO campaigns.
- Ongoing hosting fees, domain renewals, mailbox renewals, paid provider upgrades, or maintenance after the included support window.

04 / COMMERCIAL TERMS

Fees, payment, and production costs

All development amounts below are in Egyptian Pounds. Third-party provider costs are in US Dollars and remain estimates until checkout.

Development fee and milestones

Milestone	Trigger	Amount
100% - Final payment	Due at final completion, immediately before production launch, credential handover, and transfer of final project materials.	EGP 25,000

Third-party production estimate

Item	Planned term	Planning estimate	Payment responsibility
section-wood-works.com	2 years	Approx. USD 35	Client
Two business email seats	2 years	Approx. USD 30 total	Client
Production hosting	1 year	Approx. USD 65-70	Client
Estimated initial total	As above	Approx. USD 130-135	Client

- Provider prices, domain availability, exchange rates, discounts, taxes, and renewal rates are outside the Developer's control.
- The Client will approve the checkout total before purchase. The Client should own the provider account, domain registration, and billing relationship. If the Developer pays on the Client's behalf, reimbursement is due in advance.
- Development work may pause while an invoice is overdue. A pause automatically moves the delivery schedule by at least the same number of delayed days.
- Any legally required tax or withholding treatment will be documented by the parties and reflected on the relevant invoice or receipt.

Schedule

Target launch date: 1 August 2026. The working schedule begins after signature and delivery of the minimum required content and access. Delayed content, access, approvals, or production-service decisions may move the launch date accordingly.

Revisions

The fee includes two consolidated review rounds for the public experience and one consolidated review round for the administration portal. A review round means one organized list of feedback from the Client's authorized representative. New features, repeated redesigns, or changes after approval require a written estimate or change order.

05 / WORKING RESPONSIBILITIES

A clear path to approval

Each party will appoint one authorized representative. Instructions and approvals from that representative may be relied upon by the other party.

CLIENT RESPONSIBILITIES	DEVELOPER RESPONSIBILITIES
- Provide final legal business name, brand assets, contact details, addresses, and approved English and Arabic content. - Provide project facts, image captions, client permissions, testimonials, and written confirmation of rights to all supplied materials. - Confirm that no confidential, misleading, restricted, or unauthorized project material is published. - Maintain access to and payment for the production provider accounts after handover.	- Implement the agreed scope with reasonable professional care and keep the Client informed of material risks or blockers. - Use supplied content only for the project and protect non-public credentials and inquiry data with reasonable safeguards. - Test the core public journey, inquiry submission, protected portal access, and production configuration before handover. - Correct reproducible defects covered by the acceptance criteria and included support period. - Provide practical handover notes for production access and ordinary inquiry administration.

Acceptance criteria

- English and Arabic public routes render correctly, and Arabic pages use right-to-left layout without material horizontal overflow.
- Landing, portfolio, project stories, collection pages, and inquiry journey operate on current desktop and mobile browsers.
- Valid inquiries are stored before notification is attempted; invalid or oversized uploads are rejected; private attachment links expire.
- The authorized admin user can sign in, view inquiry records and details, access permitted attachments, and update the agreed inquiry statuses.
- Production metadata, sitemap, robots instructions, canonical URL, SSL, and domain connection are configured using the final production origin.

Review and acceptance

The Client will test each submitted milestone and provide one consolidated written list of material issues. The Developer will correct in-scope defects and resubmit. Silence does not waive defects, but it pauses the schedule until feedback is received. Launch approval or normal production use confirms acceptance of the delivered milestone, except for hidden defects covered by the support period.

Included support

The Developer will provide 14 calendar days of post-launch defect support. This covers reproducible failures against the signed scope, not new features, content changes, provider outages, account misuse, third-party pricing changes, or damage caused by later code changes. Ongoing maintenance may be agreed separately.

06 / OWNERSHIP, RISK, AND SIGNATURE

Standard project protections

These terms are intended to keep ownership, confidentiality, data handling, and termination clear for both parties.

Clause	Term
Intellectual property	After full payment, the Client owns the final custom website design and project-specific code delivered under this agreement. The Developer retains ownership of pre-existing tools, general methods, reusable utilities, and know-how. Open-source software, fonts, and third-party services remain subject to their own licenses.
Client materials	The Client retains ownership of all supplied trademarks, copy, images, plans, and project information and grants the Developer a limited license to use them only to perform this agreement. The Client is responsible for having the necessary rights and approvals.
Confidentiality	Each party will protect non-public commercial, technical, credential, and project information and use it only for this project, except where disclosure is required by law or approved in writing.
Inquiry data	The Client controls the business use of submitted inquiry data after launch. The parties will use reasonable safeguards, limit staff access, and avoid publishing inquiry data. Provider terms and lawful retention requirements may also apply.
Third-party services	Hosting, domain, email, storage, authentication, and notification services are supplied by independent providers. The Developer will configure the agreed services but does not guarantee uninterrupted service, unchanged pricing, continued availability, or provider policy.
Termination	Either party may terminate for a material breach that remains uncured for seven calendar days after written notice. The Client will pay for completed work and approved non-cancellable costs up to the termination date. The Developer will provide paid-for work in its then-current state.
Liability	Neither party is liable for indirect or consequential loss. To the maximum extent permitted by applicable law, the Developer's aggregate liability arising from this project will not exceed the EGP 25,000 development fee, except for fraud, willful misconduct, or liabilities that cannot legally be limited.
Disputes and law	The parties will first attempt good-faith negotiation. Unless amended in writing before signature, this agreement is governed by the laws of the Arab Republic of Egypt and disputes fall within the competent courts of Cairo.
Entire agreement	This document, including its meeting record and scope, is the entire agreement for this project and replaces earlier informal descriptions of the same work. Changes must be recorded in writing and approved by both authorized representatives.

Signatures

By signing, each representative confirms authority to bind the named party and accepts the meeting record, scope, commercial terms, and conditions above. The parties may sign in counterparts using handwritten signatures or a legally recognized electronic-signature method.
